1 Work out $\dfrac{1}{10} + \dfrac{3}{5}$

(2 marks)

2 (a) Work out $\dfrac{2}{3} - \dfrac{1}{4}$ (2)

(b) Work out $\dfrac{3}{4} \times \dfrac{4}{9}$ (2)

Give your answer as a fraction in its simplest form.

(4 marks)

3 Work out $\dfrac{3}{4} \times \dfrac{5}{6}$

(2 marks)

4 (a) Work out $\dfrac{1}{5} + \dfrac{3}{4}$ (2)

(b) Work out $\dfrac{4}{5} - \dfrac{1}{3}$ (2)

(4 marks)

5 Work out $\dfrac{3}{4} + \dfrac{1}{12}$

(2 marks)

6 (a) Work out $\dfrac{4}{9} + \dfrac{3}{5}$ (2)

(b) Work out $\dfrac{3}{5} \div \dfrac{3}{8}$ (2)

Give your answer as a mixed number in its simplest form.

(4 marks)

7 Work out $\dfrac{1}{7} \div \dfrac{3}{4}$

(2 marks)

8 (a) Work out $\dfrac{5}{6} - \dfrac{1}{7}$ (2)

(b) Work out $1\dfrac{3}{4} \times 1\dfrac{1}{2}$ (2)

Give your answer as a mixed number in its simplest form.

(4 marks)

9 Work out $\dfrac{1}{5} + \dfrac{2}{7}$

(2 marks)

10 (a) Work out $\dfrac{3}{4} - \dfrac{7}{10}$ (2)

(b) Work out $2\dfrac{1}{3} \times \dfrac{3}{5}$ (2)

Give your answer as a mixed number in its simplest form.

(4 marks)

| Grade 3 | Fractions | Grade 3 |

11   Work out $\dfrac{5}{6} - \dfrac{2}{5}$

(2 marks)

12   (a) Work out $\dfrac{7}{8} \div \dfrac{3}{4}$ (2)

Give your answer as a mixed number in its simplest form.

(b) Work out $1\dfrac{5}{6} \times \dfrac{2}{9}$ (2)

(4 marks)

13   Work out $1\dfrac{3}{5} \div \dfrac{3}{4}$

(2 marks)

14   (a) Work out $2\dfrac{1}{5} + 1\dfrac{1}{7}$ (2)

(b) Work out $1\dfrac{1}{6} \div \dfrac{2}{3}$ (2)

Give your answer as a mixed number in its simplest form.

(4 marks)
